

**IN THE CLAIMS:**

Please cancel claims 1-6 without prejudice to or disclaimer of the subject matter recited therein.

Please add new claims 7-12 as follows:

**LISTING OF CURRENT CLAIMS**

Claims 1-6. (Canceled)

Claim 7. (New) A locating device for supporting a fan shaped blind connected to a top of a frame comprising:

- a) a retaining mount inserted into an arched room located in a center of a bottom of the fan shaped blind and connected to the frame;
- 5      b) a first supporting board removably connected to the retaining mount and located on a first side of the fan shaped blind; and
- c) a second supporting board removably connected to the retaining mount and located on a second side of the fan shaped blind,

10      wherein the retaining mount having a coupling groove, the first supporting board having a first protruded part, the second supporting board having a second protruded part, the first protruded part and the second protruded part are inserted in the coupling groove of the retaining mount locating the first supporting board and the second supporting board on lateral sides of the retaining mount.

Claim 8. (New) A locating device for supporting a fan shaped blind connected to a top of a frame comprising:

- a) a retaining mount inserted into an arched room located in a center of a bottom of the fan shaped blind and connected to the frame;
- 5      b) a first supporting board removably connected to the retaining mount and located on a first side of the fan shaped blind; and
- c) a second supporting board removably connected to the retaining mount and located on a second side of the fan shaped blind,

10 wherein the retaining mount having a coupling groove, the retaining mount is integrally made with the first supporting board, the second supporting board having a protruded part, the protruded part is inserted in the coupling groove of the retaining mount, the first supporting board and the second supporting board are located on opposing sides of the retaining mount.

Claim 9. (New) A locating device for supporting a fan shaped blind connected to a top of a frame comprising:

- a) a retaining mount inserted into an arched room located in a center of a bottom of the fan shaped blind and connected to the frame;
- 5 b) a first supporting board removably connected to the retaining mount and located on a first side of the fan shaped blind; and
- c) a second supporting board removably connected to the retaining mount and located on a second side of the fan shaped blind.

Claim 10. (New) The locating device according to claim 9, wherein the retaining mount having an arc top surface, a through hole vertically protruding through a center thereof.

Claim 11. (New) The locating device according to claim 9, wherein the arc top surface of the retaining mount having a shape matching a shape of a top of the arched room of the fan shaped blind.

Claim 12. (New) The locating device according to claim 9, wherein the first support board and the second support board have a pattern matching a pattern of the fan shaped blind.
